FITNESS FOR DUTY (FFD) PROGRAM PERFORMANCE DATA: JANUARY-JUNE 2001

In accordance with 10 CFR 26.71(d), enclosed is TVA's FFD Program Performance Data for the six-month period of January 1-June 30, 2001. Enclosure 1 contains a discussion of recent FFD Program developments and FFD trends since the last reporting period. Enclosures 2-4 contain the performance data and summary of TVA management actions for TVA's nuclear plant sites (Browns Ferry, Sequoyah, and Watts Bar, respectively). Enclosure 5 consolidates the data for TVA's Nuclear corporate organization (primarily Chattanooga and Knoxville corporate offices) and Bellefonte Nuclear Plant. Enclosure 6 includes one FFD event reported to the NRC pursuant to 10 CFR 26.73 during this six-month period.

The random testing rate of drug and alcohol use for the workforce that is subject to random testing is in accordance with the requirements prescribed in 10 CFR 26.24 (a)(2).

If you have any questions concerning this information, please telephone Terry Knuettel at (423) 751-6673.

Sincerely,

Mark J. Burzynski
 Mark J. Burzynski
 Manager

ENCLOSURE 1

TENNESSEE VALLEY AUTHORITY (TVA)
FITNESS FOR DUTY (FFD) PERFORMANCE DATA
JANUARY 1-JUNE 30, 2001

The following summarizes a matter associated with TVA's FFD Program that occurred during this reporting period:

TVA's "Re-screening of Specimens"

Reference: TVA's policy to re-screen specimens with a creatinine level less than 20 mg/dl, which was addressed in the February 28, 1997 FFD Performance Report.

Summary

TVA Nuclear (TVAN) screened 57 specimens at the lower cutoff for marijuana during this reporting period. There was one positive test identified from this group.

JANUARY 1-JUNE 30, 2001

TRENDS

The confirmed positive test rate for all categories (pre-employment, pre-access, for-cause, post-accident, random, follow-up, and other) for this reporting period was 0.36 percent (10 positive tests) which is 0.23 percent lower than the last reporting period. The rate of random confirmed positives was 0.34 percent (5 positive tests) which is 0.06 percent higher than the last reporting period. For this reporting period there is no adverse trend regarding this positive rate since the percentage increase in the rate of random confirmed positives (0.06) is statistically insignificant.

ENCLOSURE 2

SUMMARY OF MANAGEMENT ACTIONS FOR
BROWNS FERRY NUCLEAR PLANT

In the **pre-access** test category, four contract employees (CEs) tested positive. The CEs were denied access, removed from site, returned to the contract company, and restricted from TVAN work for three years. Two of the CEs requested that a split specimen test be performed. The split specimen tests reconfirmed the positive test results. None of the CEs requested an appeal.

In the **random** test category, one CE who had been requested for unescorted access and was included in the random testing population, but who had not yet been granted unescorted access, tested positive. The CE was denied access, removed from site, returned to the contract company and restricted from TVAN work for three years. A review of the CE's work was performed with no deficiencies revealed. The CE requested that a split specimen test be performed. The split specimen test reconfirmed the positive test results. The CE did not request an appeal.

ENCLOSURE 3

SUMMARY OF MANAGEMENT ACTIONS FOR
SEQUOYAH NUCLEAR PLANT

In the **random** testing category, two licensee employee (LEs) tested positive. The LEs' unescorted access were revoked. Both LEs were removed from site, suspended from work for 14 days and referred to the Employee Assistance Program. Reviews of the LEs' work were performed with no deficiencies revealed. The first LE did not request a confirmatory blood alcohol test nor an appeal. The first LE returned to work during this reporting period and was placed in the follow-up testing program. The second LE requested that a split specimen test be performed. The split specimen test reconfirmed the positive test results. The second LE did not request an appeal. The second LE was returned to a non-nuclear organization and restricted from TVAN work for three years. The second LE was subsequently terminated from employment effective May 9, 2001.

ENCLOSURE 4

SUMMARY OF MANAGEMENT ACTIONS FOR
WATTS BAR NUCLEAR PLANT

In the **random** testing category, two LEs tested positive. The LEs' unescorted access were revoked. In addition, one of the LEs held a Department of Energy (DOE) clearance, and this clearance was also revoked (reference Enclosure 6). The LEs were removed from site, suspended for 14 days and referred to the Employee Assistance Program. Reviews of the LEs' work were performed with no deficiencies identified. Neither LE requested that a split specimen test be performed. Neither LE requested an appeal. The LE whose DOE clearance was revoked returned to work during this reporting period and was placed in the follow-up testing program. The second LE did not return to work during this reporting period.

In the **for-cause** testing category, one LE tested positive. The LE's unescorted access was revoked. The LE was removed from site and permanently restricted from TVAN work. A review of work was performed with no deficiencies identified. The LE did not request a confirmatory blood alcohol test. The LE requested an appeal. The appeal upheld the positive test results. The LE's termination from employment was effective April 6, 2001.
