Vonna,

Attached is my draft Quad Cities SDP evaluation of their OSRE. I don't think this is considered safeguards information since the only information revealed is the unavailable equipment assumed to be successfully attacked during the simulation/drill (basically the same information contained in the non-safeguards information email from the licensee that Jesse gave me), but someone smarter than I on that should make the call.

This is forwarded with the acknowledgement that it is my work alone, having not been checked over by anyone else. I've also attempted to better explain the role of the reactor safety SDP within the physical protection SDP. Any questions about this can be sent my way (301-415-1244) or DHC.

Please put John Thompson, Pete Wilson, Mike Parker, and Gareth Parry as cc addressees when you forward this to the SERP members. Thanks,

Doug
