INDIAN POINT STATION

FITNESS-FOR-DUTY SUMMARY AND MANAGEMENT ACTIONS

This report identifies Fitness-For-Duty activities at the Indian Point Station, Units 1 and 2, from January 1, 2001 to June 30, 2001. A total of 744 drug and alcohol tests were conducted during the reporting period; 365 initial or pre-access tests, 367 random tests and 12 for-cause tests.

For this six month period, the average number of plant workers with unescorted access was 1,382. For the remainder of the year, the actual random testing will be monitored and tracked to ensure that on an annual basis, random drug and alcohol testing will be conducted at a rate equal to at least fifty percent (50%) of the total unescorted work force (employees and contractors).

During the report period, 9 individuals tested positive to drugs or alcohol or were adjudicated by the Medical Review Officer (MRO) as an administrative failure.

The 9 individuals who tested positive were contractors, 6 were pre-access / initial tests, 2 were for-cause tests that tested positive to alcohol and 1 administrative failure (refusal). There were no positive random tests.

The 6 pre-access / initial tests that resulted in MRO positives were attributed to 6 drug failures consisting of 3 for marijuana, 2 for cocaine, 1 opiates (heroin).

Two contractors tested positive to alcohol and a third refused to test; all were detected by security search entry officers before they entered the Protected Area.

Contractor employees who tested positive to drugs or alcohol were denied unescorted access and barred from site.

The positive tests were properly recorded in the NRC Fitness-For-Duty Log Book. There were no instances requiring NRC notification relative to licensed operators or supervisors testing positive to either drugs or alcohol.
