Kim,

Regarding the concern of broken screws in the ice condenser, I sent the Concerned Individual (CI) an acknowledgement letter of his concerns plus DOL rights on January 14, 1996. The allegation case number is RII-96-A-0249. In my letter to the CI, I indicated that we will provide the CI feedback on inspection findings. But I didn't say by when. We normally target closure of tech concerns within 90 days. In this case, it is March 20, 1997. Thus, I can provide the CI this information instead of the time frame we plan to perform inspection. In fact it may be inappropriate to tell him when we plan to inspect.

Also, based on your allegation report, one can view the allegation against Duke Power whereas the CI appears to have said that Duke had performed an internal analysis of the issue which did not involve Westinghouse nor did they (Duke Power) highlight the issue as an industry problem. Do you know if the CI was making an allegation against Duke Power and TVA or was it TVA only? I can attempt to contact the CI for clarification of his concern if it is warranted. Let us discuss this before I take any action in attempting to contact the CI.

Al,

For your info. What do I need to do with this.

Chris

The alleged re ice condenser work called today to inform me that he mailed a DOL complaint today. He is interested as to when we will be inspecting concern. Do you know yet? Also does the allegation coordinator need to know this info? I don't know the allegation number.

Can you tell me what the main/tests inspection scheduled for 3/17/97 will consist of?

I believe that he was indicating that Duke Power may have inappropriately handled the issue at McQuire in that they failed to involve the vendor and did not highlight an industry issue. I do believe we need to look at McGuire. Duke may be somewhat unique in that they may have damaged screws during ice removal since they shook the ice out versus thermal drilling.
