Security Identification Systems Corp.

"SISCO has provided the maritime industry with the ability to produce a photo passenger manifest for every passenger boarding cruise ships. This proven access control technology can immediately be implemented in the nuclear industry"

.... Mr. Anthony Zagami
CEO SISCO

Wednesday, September 19, 2001

Mr. Richard Meserve
Chairman
Nuclear Regulatory Commission
One White Flint North
11555 Rockville Pike
Rockville, MD 20852

Dear Mr. Meserve:

Since 1994 SISCO (Security Identification Systems Corporation) has provided the cruise line industry with a means to quickly photograph each passenger and visitor upon embarkation. Historically, our security systems have processed millions of crew and passenger on the countries largest cruise lines. The boarding process is extremely fast and enables the cruise lines to produce a photo manifest for each and every passenger, visitor and crewmember. This same technology can be now be implemented to a nuclear facility application. Some of the benefits of our FAST-PASS system include:

- Pictured manifest and document image (driver's license, business card etc.) reports on each visitor and contractor on a nuclear site.
- High-Speed technology, making the process very quick.
- Meets current Souls on Board Maritime Security Requirements.
- Can Incorporate Facial Recognition software to search and match suspect individuals.

Could the nuclear facilities across the United States benefit from using this proven technology to address increased security concerns? We're prepared to help you determine the answer.
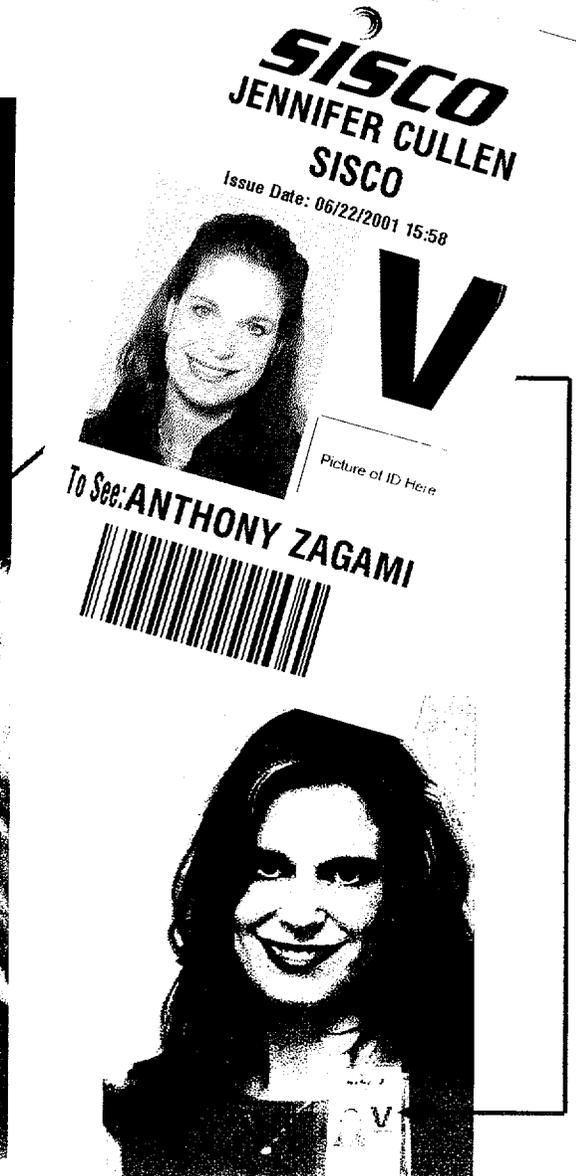

Sincerely,

John P. Yochum
Director Business Security Solutions

P.S. I will call your office on Monday, September 24, 2001 at 2:35 PM. If you will not be in, or if this is a bad time, please have Linda Herr advise me of a more convenient time.

A Whole New Way Of Tracking And Controlling Visitors

SISCO

FAST-PASS® Desktop

FAST-PASS® desktop version includes CPU, capture device, mouse and keyboard, printer and pass.

Visitor Passes come in a variety of sizes and forms. Adhesive pass shown.

Photo on pass immediately!

Here is how the FAST-PASS® desktop works:

The desktop version assists the receptionist or security officer with issuing a photo visitor's pass within seconds of their arrival. The visitor is asked for a form of identification and for whom they are going to see. Using the *FAST-PASS*® desktop system, the receptionist or security officer will then place the document on the *FAST-PASS*® document reader.

A photo image is taken of the document and the visitor. The photo of the visitor, name, date, time, company and whom the person is seeing will be prominently displayed on each visitor pass. The database holds a photo record of each visitor along with the document and is customizable. The pass can also include the driver's license or business card information, time out, optional non-disclosure agreement compliance and visitor, contractor, vendor or employee differentiation. No more waiting in long lines to process visitors!

FAST-PASS® incorporates a deny entry feature that enables unwanted visitors to be programmed into the system. Access is immediately denied for unwanted visitors, thereby assisting your needs in addressing violence in the workplace issues

Custom visitor reports are available showing, daily, weekly and monthly visitor counts as well as the ability to search visitors by company department, date, time, and visiting employee.

FAST-PASS® can be used as a stand-alone system or it can be integrated into an existing access control system. Visitor passes can be color coded and printed on thermal paper, adhesive backed paper or thin plastic PVC cards.

FAST-PASS® has the ability to store database information for over one million visitors. Photo visitor, contractor, temporary worker or VIP passes can also be printed within seconds.

FAST-PASS® can identify exactly how many visitors are in your facility, in real time. An optional exit reader or biometric reader is also available.

The Complete Solution

The optional biometric hand reader will reduce waiting time for frequent visitors or vendors immediately. They no longer have to re-enter personal information again since it is all stored in the database and can be retrieved quickly and easily by the reader. Time and attendance can also be tracked for all company employees or temporary workers, saving time and money!

FAST-PASS® can be used as a stand-alone system or it can be integrated into your existing access control system. Visitor passes can be color coded and printed on thermal paper, adhesive backed paper or thin plastic PVC cards.

With FAST-PASS® you can now have all the important information about your visitors at your fingertips.

FAST-PASS VISITOR SYSTEM
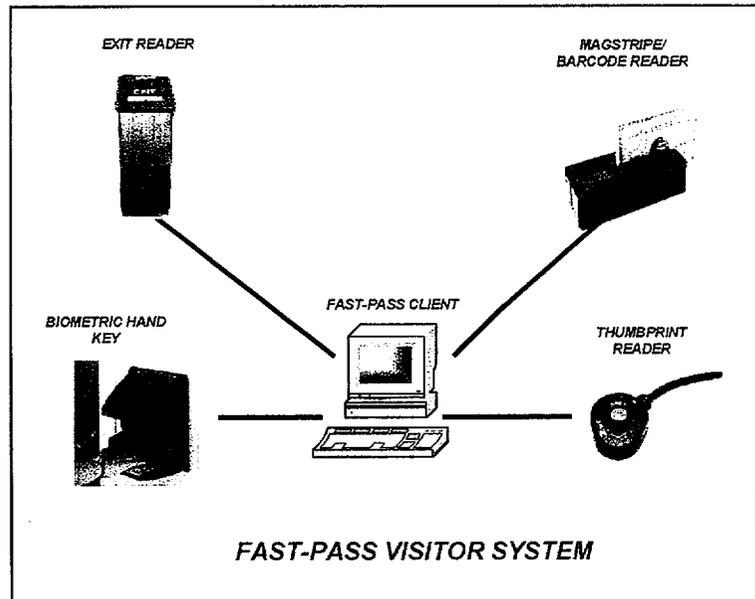

Optional peripherals available for the FAST-PASS® system

Here are some of FAST-PASS®
custom features:

✓ Visitor's photo on pass

✓ Visitor's name on pass

✓ Date

✓ Time in

✓ Time out

✓ Visitor's company name

✓ Your company logo

✓ Driver's license copy

✓ Non-disclosure agreement
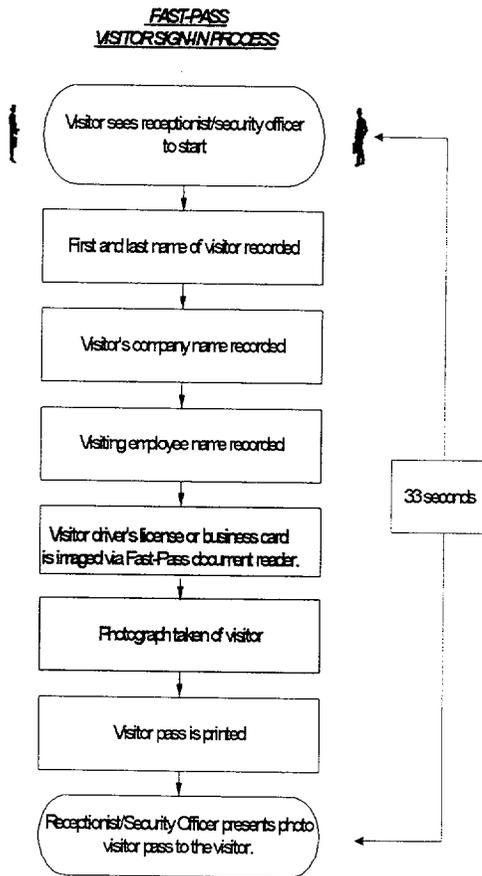

✓ Deny entry feature

✓ Real time status of visitors

FAST-PASS® Automated kiosk
(optional)

Exit reader
(optional)

The Complete Visitor Solution

Typical application:

**FAST-PASS
VISITOR SIGN-IN PROCESS**

```
     ( Visitor sees receptionist/security officer )
     (            to start                        )
                    ↓
     [ First and last name of visitor recorded ]
                    ↓
     [ Visitor's company name recorded ]
                    ↓
     [ Visiting employee name recorded ]
                    ↓                        [ 33 seconds ]
     [ Visitor driver's license or business card ]
     [ is imaged via Fast-Pass document reader.  ]
                    ↓
     [ Photograph taken of visitor ]
                    ↓
     [ Visitor pass is printed ]
                    ↓
     ( Receptionist/Security Officer presents photo )
     (  visitor pass to the visitor.                )
```

Here are just some of the FAST-PASS® Features:

1. Takes photo of a visitor and the complete pass process takes less than one minute

2. Prints an adhesive backed pass, paper pass, color pass or color employee ID cards

3. An automated database that can be accessed within seconds

4. Ability to encode a magnetic stripe on paper or a plastic card

5. Pass identifies which employee the visitor is going to see

6. Differentiates between a visitor, vendor or temporary worker

7. Logs visitors out of the building and can generate a report showing how long a person has been in the building

8. Denies entry for those visitors you do not want in the building, thereby decreasing violence in the workplace concerns.

9. Runs a time and attendance report for temporary workers to validate payroll.

10. Integrates with other access control devices such as doors, turnstiles, portals and biometric devices

Technical data:

NT Client/Server
Windows 98 client
IIS Web Server
TCP/IP Network protocol
Biometric Interface available

FAST-PASS® configurations available:
► Desk Top
► Kiosk
► Stand-alone
► Network

SISCO pioneered the high-speed photo identification access control and tracking systems for the cruise line industry. This same technology is now available to the commercial market with *FAST-PASS®*, providing a more efficient visitor control system.

NEWS   RELEASE

NYPD Headquarters Chooses _SISCO_® For Visitor Control

For Immediate Release

      WEST PALM BEACH, FLORIDA, MARCH 30, 2001 – _SISCO_ (Security Identification Systems Corporation) announced today that the installation of _FAST-PASS_® has been successfully completed at the New York City Police Department (NYPD) headquarters. _FAST-PASS_® is an automated visitor registration and badging system that assists security and/or administrative personnel with the handling and managing of visitor traffic.

      "The headquarters facility receives a large number of visitors each day who carry various forms of identification. _FAST-PASS_® was the only viable visitor system that could meet such demanding criteria," said John Yochum, _SISCO's_ Director of Sales. The _FAST-PASS_® system allows the lobby desk officer to photograph the visitor, capture the visitor's identification and information, and print a visitor pass. The entire process is accomplished in seconds. The image of the visitor's identification and photo along with visitor activity can then be accessed through the management system at any time for review.

      Due to heightened security measures now being taken by corporate entities, _FAST-PASS_® has become the preferred method of tracking and controlling visitors.

      Security Identification Systems Corporation (_SISCO_) develops and installs software and hardware based solutions for physical security and access control. _SISCO's_ access control systems offer a variety of features and benefits that are tailored to meet the specific security needs of each customer. Each access control system installed by _SISCO_ integrates the necessary state-of-the-art hardware with user-friendly software. This dynamic combination provides the client with the means to regulate access to its secure areas, track all movements through access points and to generate reports based on the specific needs of the client.

      Since 1998, _SISCO's_ premier product _A-PASS_®, has been the industry standard for access control in the Cruise Line industry. SISCO has long-term contracts with all of the major cruise lines that represent the majority of worldwide passenger bookings.
