INTRODUCTION

By letter dated August 26, 1975, the Licensee requested a change to the Technical Specifications for the Millstone Nuclear Power Station, Unit 2. The change, which applies to Appendix A to the license, would correct an error made in the development of the original Technical Specifications.

The staff's evaluation of the change is discussed below. The staff's conclusions follow the discussion.

DISCUSSION

The Licensee has proposed a change in Specification 3.3.2.1, Table 3.3-5, governing the response time testing of the feedwater isolation system (Item 6.b) to correct an error made in the development of the original specification. The proposed revised response time of ≤ 60 seconds for feedwater isolation is consistent with the assumptions of the accident analysis of a main steam line break contained in Section 14.12.2 of the Millstone Unit 2 FSAR. We find that the proposed

change to Table 3.3-5 does not create a significant hazards consideration and would not endanger the health and safety of the public. Therefore, we conclude that the requested change in Specification 3.3.2.1, Table 3.3-5, should be authorized.

CONCLUSIONS

We have concluded, based on the considerations discussed above, that: (1) because the change does not involve a significant increase in the probability or consequences of accidents previously considered and does not involve a significant decrease in a safety margin, the change does not involve a significant hazards consideration, (2) there is reasonable assurance that the health and safety of the public will not be endangered by operation in the proposed manner, and (3) such activities will be conducted in compliance with the Commission's regulations and the issuance of this amendment will not be inimical to the common defense and security or to the health and safety of the public.
