

October 24, 2001

MEMORANDUM TO: Lakshminaras Raghaven, Chief, Section 1
Project Directorate I
Division of Licensing Project Management

FROM: Robert G. Schaaf, Project Manager, Section 1
Project Directorate I */RA/*
Division of Licensing Project Management

SUBJECT: SUSQUEHANNA STEAM ELECTRIC STATION, UNITS 1 AND 2 -
ADMINISTRATIVE CLOSURE OF TASK ASSIGNMENT
(TAC NOS. MB2389 AND MB2390)

The subject task assignment control numbers (TAC Nos. MB2389 and MB2390) were opened to support review of the licensee's June 25, 2001, submittal requesting a one-cycle extension of the schedule for removing and testing the Unit 1 reactor pressure vessel surveillance capsule.

Technical review under these TAC numbers was initiated by the Materials and Chemical Engineering Branch (EMCB). However, the EMCB staff identified that the subject request needed to be submitted as a license amendment request in accordance with the guidance of Nuclear Regulatory Commission (NRC) Administrative Letter 97-04, "NRC Staff Approval for Changes to 10 CFR 50, Appendix H, Reactor Vessel Surveillance Specimen Withdrawal Schedule."

The licensee was notified of the need for an amendment request by teleconference on August 3, 2001. By letter dated September 19, 2001, the licensee submitted a license amendment request which supersedes the June 25, 2001, request. The amendment request will be reviewed under TAC No. MB3045.

Based on the above, the subject TAC Nos. (MB2389 and MB2390) are administratively closed.

Docket Nos. 50-387 and 50-388
