Sludge pile and U-bends

Edmund Sullivan, Jack Strosnider, Stephanie

Hello all - things appear to be winding down - I am still owed by Con Ed some information on th sludge pile (i.e. c-scan plots for the tubes that in the CMOA Westinghouse says were greater than 40% TW in 1997)

I still need any inspoction type of inspoformation from the NRR folks about what was done in Feb. March and April - I NEED THIS ASAP!!!! This shopuld include any perroamcne issues that have not already been captured.

As far as the sludge pile - Caius - do you have any feeling about the detectability of the indications? How do we factor in the "Monkey Tube" issues as far as POD. I need any information on this ASAP. If there is any c-scan information on these that too would be helpful.

I also need the C-scan plot information on the U-tubes (6 of them) that we believe Con Ed with proper care should have found.
