Pam -

Duratek is coming onsite to begin the characterization study after Thanksgiving. I will sit with their Project Coordinator to answer your questions regarding the Decommissioning phase of the project. Specifically, the procedures for sand blasting or scabbling will be finalized. At this point, decommissioning will probably begin in February. I anticipate responding to your questions in early December so you can provide your feedback and approval before we are scheduled to begin decommissioning activities.

Michael,

We are going to Void the current amendment action (130308) that we have open for your decommissioning plan (DP). This action has been open since 9/19/01 and since it is unlikely that you will actually submit the DP until early December, the 90 day goal for completion of amendments would have been exceeded.

When we receive the DP we will open a new amendment action and start from there. Do **not** refer to control number 130308 when you submit the DP. The DP will be assigned a new control number when it is received.

Thanks and Happy Holidays,

Pam
