The Commission has issued the enclosed Amendment No. ²² to Facility Operating License No. DPR-71 and Amendment No. ⁴⁶ to Facility Operating License No. DPR-62 for the Brunswick Steam Electric Plant (BSEP), Units Nos. 1 and 2, respectively. These amendments consist of changes to the Technical Specifications in response to your requests dated April 26, 1977, June 22, 1977, and February 12, 1979 for Brunswick Unit No. 1 and February 12, 1979 for Brunswick Unit No. 2. The BSEP Unit No. 2 Technical Specifications were previously similarly changed in response to your requests dated February 2, 1976, August 18, 1976 and August 3, 1977 by Amendment Nos. 32 and 38 to DPR-62.

Amendment No. for Brunswick Unit No. 1:

This amendment changes (1) the reactor water cleanup system isolation setpoint, the standby gas treatment system actuation setpoint, and the setpoint for isolation of secondary containment, and (2) deletes high drywell pressure as an isolation signal for the residual heat removal system.

This amendment changes the low pressure permissive setpoint for starting the Low Pressure Coolant Injection (RHR) pumps and Core Spray pumps, opening the injection valves and closing the recirculation pump discharge valves.

This amendment also (1) corrects various errors and inconsistencies made in applying the General Electric Boiling Water Reactor Standard Technical Specifications (BWR-STs) to Brunswick Unit No. 1, and (2) corrects editorial and typographical errors previously discussed with your staff.
