**NOVEMBER 2001, OPERATION SUMMARIES
DIABLO CANYON POWER PLANT
UNITS 1 AND 2**

Summary of Unit 1 Operation

Unit 1 began November in Mode 1 (Power Operation), at approximately 100 percent power. On November 9, 2001, operators began ramping the unit to approximately 12 percent power. On November 10, 2001, operators separated the generator from the grid in order to perform planned maintenance on the main generator and circulating water system, while the reactor remained at 12 percent power. On November 12, 2001, operators paralleled the unit and ramped the unit to approximately 50 percent power, and continued with circulating water system maintenance. On November 14, 2001, operators completed the ramp to approximately 100 percent power. On November 21, 2001, as a precaution to a forecast of high ocean swells and ocean debris, operators reduced power to approximately 20 percent. On November 22, 2001, operators ramped the unit to approximately 100 percent power.

Summary of Unit 2 Operation

Unit 2 began November in Mode 1 at approximately 100 percent power. On November 21, 2001, as a precaution to a forecast of high ocean swells and ocean debris, operators reduced power to approximately 20 percent. On November 22, 2001, operators ramped the unit to approximately 100 percent power.

Actuations of Safety or Pressurizer Power Operated Relief Valves

There were no challenges to the pressurizer power operated relief valves, pressurizer safety valves, or steam generator safety valves.
