DRAFT SUMMARY OF INFORMATION COLLECTION REQUEST

Title: 10 CFR Part 100, Reactor Site Criteria

Current Burden/Responses: 5,000 hours/1 response

Proposed Burden/Responses: 9,000 hours/2 responses

Burden Attributable to Third-Party Collections: None

Number of Respondents: One

Frequency of Response: As needed

Reasons for Changes in Burden/Responses: The overall burden estimate for 10 CFR Part 100 has increased 4,000 hours for the next clearance period from 5,000 hours to 9,000 hours. During our re-examination of Part 100, we found that Section 100.21 was inadvertently omitted from the clearance package and the burden was being captured under Section 100.23. Upon further examination, it was determined that the burden for Section 100.23 was not sufficient to include the non-seismic criteria. Therefore, Section 100.21 has been added with an estimated 4,000 hours.

There has been an increase in the overall cost as a result of an increase in the rate from \$124 per hour to \$150 per hour in accordance with Part 170.

Recordkeeping Requirements in Accordance with the Retention Periods for Records Rule: N/A

Search of the Information Requirements Control Automated System (IRCAS):  
IRCAS was searched on January 2, 2002. No duplication was found.

Abstract: The "Reactor Site Criteria" of 10 CFR Part 100 establishes approval requirements for proposed sites for the purpose of constructing and operating stationary power and testing reactors pursuant to the provisions of 10 CFR Parts 50 and 52. NRC uses the information required by 10 CFR Part 100 to assess the adequacy of proposed seismic design bases and design bases for other geological hazards, such as, faulting, seismic hazards, and the maximum credible earthquake for nuclear power and test reactors.
