Contact: Ron Siebert **Telephone No.:** (571) 471-7111

License No.: N/A **Docket No.** N/A **Mail Control No.:** N/A

Subject: Response to Request For Additional Information

Summary:

NRC reviewed Met One November 28, 2001 application for Model E-BAM. NRC reviewed and sent a two page RAI to Met One on January 31, 2002. Ron Siebert, RSO has responded to the RAI in a piece meal manner. To-date he has transmitted ten facsimiles and has called NRC at least the same number of times.

As usual he called to-day to check whether NRC has received Met One fax of 02-28-02. I confirmed that we have received his fax and one page attachment related to neoprene gasket.

I reminded Ron that some of the information requested is still outstanding. More specifically the Met One Organization Chart. (This was requested as the documentation being transmitted by Met One had suffered lapses in Quality Assurance and Document Control). Ron was requested to back up the statements made in the application related to regulatory dose limit compliance to 10 CFR 32.28.

It appears Ron has limited technical knowledge and insufficient exposure to NRC regulatory regulations. On a number of occasions I have clarified the applicability of appropriate regulatory requirements and National standards to their device. Ron expects NRC to provide him with consultancy and advice and how to meet the regulatory requirements.

I explained that as a matter of policy NRC will provide guidance related to the intent and type of methods that have or can be used to meet the regulations. However, NRC is not in a position to tell him specifically how to meet the regulatory requirements.

I also conveyed to RON that when NRC has received all the requested information NRC will review the information provided and will request any additional information in writing. He was agreeable to this arrangement.

Action Required/Taken:

No action is required at this time.
