Subject: Coordination with FEMA — IP-2

You probably already have this on your startup list, but please assure there is some appropriate coordination with FEMA both regional and HQ well before restart.

As of now, I am aware of no issues that would be restart items but so much has arisen in this area that we need to be doubly certain with FEMA that there is nothing they would see coming from the sg event and its aftermath that needs to be attended to.

Please keep Congel as well as NRR program folks advised of what we have done and are doing in this regard. (eg, calls already made to regional administrator in fema region ii)

Thanks
