

August 2, 2001

MEMORANDUM TO: Charles L. Miller, Deputy Director
Licensing and Inspection Directorate
Spent Fuel Project Office, NMSS

FROM: Timothy Kobetz, Project Manager /s/ /RA/
Licensing Section
Spent Fuel Project Office, NMSS

SUBJECT: SUMMARY OF THE JULY 20, 2001, MEETING BETWEEN THE
NUCLEAR REGULATORY COMMISSION STAFF AND
TRANSNUCLEAR WEST (TAC NO. L23305)

On July 20, 2001, management and staff from the Spent Fuel Project Office (SFPO) met with representatives from Transnuclear West, Inc., (TN-West) to discuss amending the Standardized NUHOMS System to include the storage of high burn-up fuel. TN-West was supported at the meeting by Duke Energy. Attachment 1 is an attendance list. Attachment 2 contains the proposed amendment review schedule discussed by Duke Energy and TN-West. This meeting was noticed on July 6, 2001.

The meeting focused on establishing a common understanding between NRC, Duke Energy, and TN-West on the relationship between a Topical Report that will be submitted by Duke Energy and the amendment application that will be submitted by TN-West. The SFPO staff's understanding at the conclusion of the meeting was that:

- At the end of July 2001 Duke Energy would submit a Topical Report discussing the affects of long term dry storage on high burn-up (≥ 45 GWd) spent fuel from the Oconee Nuclear Power Station. Concurrently, TN-West would submit an amendment to add high burn-up spent fuel to the Standardized NUHOMS System. (Note: Subsequent to the meeting Duke Energy notified SFPO that the Topical Report would not be submitted until the end of August 2001.)
- In February 2002, Duke Energy will begin cladding creep confirmatory testing of high burn-up fuel from Oconee. Duke Energy stated that, since the purpose of testing is only to confirm the conclusions reached in the Topical Report, the results of the testing will not be included or referenced in the Topical Report. Duke Energy will make the test results available to SFPO at the conclusion of the testing in August 2003.
- SFPO staff will review the Standardized NUHOMS System amendment and the high burn-up Topical Report concurrently. The staff's evaluation of the amendment will only include those documents. If the staff determines that additional information, including test results, is required for it to make a conclusion regarding regulatory compliance, the staff will include that in a request for additional information. If test results are required, the staff will suspend its review of the application until the results are received. At that time, the staff will establish a new review schedule.
- If the staff does not require test results to determine whether the application complies with regulatory requirements the staff's review will take approximately 10 to 12 months.

- During the meeting, SFPO management and staff complimented Duke Energy for taking the initiative to conduct testing to confirm conclusions reached in the Topical Report.

No regulatory decisions or commitments were made by NRC during the meeting.

Docket Nos. 72-1004, 72-4
50-269, -270, and -287
