Document_Title: Yucca Mountain Review Plan Draft Report for Comment (NUREG-1804) Revision 2

Comments: The DOE YMP EIS indicated that the predominant radiological impacts during the preclosure period were derived from potential radon releases. In the draft NUREG-1804, the review plan did not address radiological safety issues associated with potential radon releases and their exposures to workers and the public. It is suggested that these potential safety issues including specific review plan and criteria be included in the final report.
