Dear Art:

Submitted as per your request is a complete listing of results of analyses (performed by ORNL/RASCA) of soil samples from the former Sylvania-Corning facility, Bayside, New York. All samples were analyzed for ^{238}U content by neutron activation techniques. The concentrations of ^{226}Ra and ^{232}Th in samples GTE 1-15 were determined by GeLi gamma spectrometry.

If you have questions concerning these data, please call.

Sincerely yours,

A handwritten signature in cursive script, appearing to read "B. A. Berven".

B. A. Berven, Ph.D.
RASCA Program Manager, ORNL
