The U.S. Nuclear Regulatory Commission (NRC) invites your comments on the proposed regulations for a proposed repository at Yucca Mountain.

PROJECT NUMBER  
PROPOSED RULE  
2,19,20 et al.  
(64FR8640)

1. What are your major concerns about the proposed criteria NRC is considering using to decide whether to license a repository at Yucca Mountain?

a. The radiation contributed to the dose exposure during the transportation leg is not considered for the farmers at the 12 mile mark, nor for anyone living along the transportation routes, "We have strict transportation rules" doesn't cut it. Human behavior will always break the rules, and machine failure.

b. Yucca Mt is in an area of active orogeny. It's a basin + range fault area, a great rift zone just like in East Africa that created the Red Sea & the Olduvai Gorge. We had an earthquake of 3.5 just a month ago. It is beyond me that this can be safe.

2. What issues would you like NRC to address regarding its licensing requirements for the Yucca Mountain project?

3. In your opinion, how can NRC better respond to your concerns?

Quit talking "rules solves everything"  
Tell us what's out there! eg: how much radiation is being released right now at Diablo, or Hanford? No one would say!

4. Please make any comments about NRC's role that you think would be helpful.
