DEC 23 1981

Docket Nos. 50-416
and 50-417

Mr. J. P. McGaughy, Jr.
Assistant Vice President -
Nuclear Productions
Mississippi Power and Light Company
Post Office Box 1640
Jackson, Mississippi 39205

Dear Mr. McGaughy:

Subject: Amendment to Construction Permits - Grand Gulf Nuclear
Station, Units 1 and 2

By letter dated September 26, 1980 and supplemented by letters dated December 13, 1980 and August 31, 1981, you requested amendments to Construction Permit Nos. CPPR-118 and CPPR-119 for the Grand Gulf Nuclear Station, Units 1 and 2. You proposed deleting from the permits a requirement in Condition 3.E(1). This requirement, which appears in the Environmental Protection Program Respecting Construction of the Grand Gulf Nuclear Station, Units 1 and 2, involves the monitoring and capacity of non-safety related sediment retention basins at the Station. The staff, after review, has determined that the NPDES permit (Permit No. MS0029521), issued by the Mississippi Department of Natural Resources, Bureau of Pollution Control (DNR), which contains restrictions on the capacity and dictates monitoring requirements, is adequate for maintenance and monitoring of the sediment basins at Grand Gulf. Since a valid NPDES covers the requirement which is proposed for deletion from the construction permits, we have concluded that the sediment basins' monitoring and capacity requirement, which appears in Condition 3.E (1) of the construction permits, may be deleted. Amendments No. 7 to CPPR-118 and CPPR-119 are enclosed for that purpose.

We have determined that this is an action which does not authorize a change in the types or amounts of effluents or any change in power level (10 CFR 51.5(b)(2)) and that this action will not result in any environmental impact different from that evaluated at the construction permit stage and authorized by the NRC construction permits and the NPDES permit. Having made these determinations, we have concluded that these construction permit amendments involve an action which is insignificant from the standpoint of environmental impact. Accordingly, pursuant to 10 CFR 51.5(d)(4), an environmental impact statement or a negative declaration and environmental impact appraisal need not be prepared in connection with these amendments.

These amendments do not involve significant new safety information of a type not considered by a previous Commission review of the facility. They do not involve a significant increase in the probability or consequences of an accident, do not involve a significant decrease in safety margins, and,

OFFICE ▶
SURNAME ▶
DATE ▶

therefore, do not involve significant hazards considerations. Also, based on the above description of this action and our evaluation of it, we have determined that (1) there is reasonable assurance that the public health and safety will not be endangered by these construction permit amendments, (2) the activities authorized by the amendments are in compliance with the Commission's regulations, and (3) the issuance of the amendments will not be inimical to the common defense and security or to the health and safety of the public. This change recognizes reliance on the NPDES permits for specifying conditions for the protection of the aquatic environment.

Also enclosed is a copy of the notice which has been transmitted to the office of the Federal Register for publication.

Sincerely,

Original signed by
Darrell G. Eisenhut

AMENDMENT TO CONSTRUCTION PERMIT

Amendment No. 7
Construction Permit No. CPPR-118

1. The Nuclear Regulatory Commission (the Commission) has found that:
 - A. The application for amendment to Construction Permit No. CPPR-118, transmitted by Mississippi Power and Light Company's letter dated September 26, 1980 and supplemented by letters dated December 31, 1980 and August 31, 1981, complies with the standards and requirements of the Atomic Energy Act of 1954 as amended (the Act), and the Commission's rules and regulations set forth in 10 CFR Chapter I;
 - B. The issuance of this amendment will not be inimical to the common defense and security or to the health and safety of the public;
 - C. There is reasonable assurance (i) that the activities authorized by this amendment can be conducted without endangering the health and safety of the public and (ii) that such activities will be conducted in accordance with the Commission's regulations;
 - D. The issuance of this amendment is in accordance with 10 CFR Part 51 of the Commission's regulations and all applicable requirements have been satisfied.
2. Accordingly, the Nuclear Regulatory Commission has issued Amendment No. 7 to Construction Permit No. CPPR-118. The amendment changes condition 3.E(1) of CPPR-118 by deleting the monitoring and capacity requirements for sediment retention basins from the Environmental Protection Program Respecting Construction of Grand Gulf Nuclear Station, Units 1 and 2.
3. This amendment is effective as of its date of issuance.

DOCKET NOS. 50-416 AND 50-417

MISSISSIPPI POWER AND LIGHT COMPANY

MIDDLE SOUTH ENERGY, INC.

SOUTH MISSISSIPPI ELECTRIC POWER ASSOCIATION

NOTICE OF ISSUANCE OF AMENDMENT TO CONSTRUCTION PERMITS

The U. S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 7 to Construction Permit CPPR-118 and Amendment No. 7 to Construction Permit CPPR-119, issued to Mississippi Power and Light Company, Middle South Energy, Inc. and South Mississippi Electric Power Association for the Grand Gulf Nuclear Station, Units 1 and 2, (the Facility) located in Claiborne County, Mississippi.

The amendments delete monitoring and capacity requirements for sediment retention basins from the Environmental Protection Program Respecting Construction of Grand Gulf Nuclear Station, Units 1 and 2. Such monitoring and capacity requirements for the sediment retention basins are currently covered by a National Pollutant Discharge Elimination System permit for the facility which is unaffected by these Construction Permit Amendments. The amendments are effective as of the the date of issuance.

The application for these amendments complies with the standards and requirements of the Atomic Energy Act of 1954, as amended, (the Act) and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the permit amendments. Prior public notice of these amendments was not required since the amendments do not involve a significant hazards consideration.

Docket Nos. 50-416
and 50-417

Mr. J. P. McGaughy, Jr.
Assistant Vice President -
Nuclear Productions
Mississippi Power and Light Company
Post Office Box 1640
Jackson, Mississippi 39205

Dear Mr. McGaughy:

Subject: Amendment to Construction Permits - Grand Gulf Nuclear
Station, Units 1 and 2

By letter dated September 26, 1980 and supplemented by letters dated December 13, 1980 and August 31, 1981, you requested amendments to Construction Permit Nos. CPPR-118 and CPPR-119 for the Grand Gulf Nuclear Station, Units 1 and 2. You proposed deleting from the permits a requirement in Condition 3.E(1). This requirement, which appears in the Environmental Protection Program Respecting Construction of the Grand Gulf Nuclear Station, Units 1 and 2, involves the monitoring and capacity of non-safety related sediment retention basins at the Station. The staff, after review, has determined that the NPDES permit (Permit No. MS0029521), issued by the Mississippi Department of Natural Resources, Bureau of Pollution Control (DNR), which contains restrictions on the capacity and dictates monitoring requirements, is adequate for maintenance and monitoring of the sediment basins at Grand Gulf. Since a valid NPDES covers the requirement which is proposed for deletion from the construction permits, we have concluded that the sediment basins' monitoring and capacity requirement, which appears in Condition 3.E (1) of the construction permits, may be deleted. Amendments No. 7 to CPPR-118 and CPPR-119 are enclosed for that purpose.

We have determined that this is an action which does not authorize a change in the types or amounts of effluents or any change in power level (10 CFR 51.5(b)(2)) and that this action will not result in any environmental impact different from that evaluated at the construction permit stage and authorized by the NRC construction permits and the NPDES permit. Having made these determinations, we have concluded that these construction permit amendments involve an action which is insignificant from the standpoint of environmental impact. Accordingly, pursuant to 10 CFR 51.5(d)(4), an environmental impact statement or a negative declaration and environmental impact appraisal need not be prepared in connection with these amendments.

These amendments do not involve significant new safety information of a type not considered by a previous Commission review of the facility. They do not involve a significant increase in the probability or consequences of an accident, do not involve a significant decrease in safety margins, and,

OFFICE ▶
SURNAME ▶
DATE ▶

therefore, do not involve significant hazards considerations. Also, based on the above description of this action and our evaluation of it, we have determined that (1) there is reasonable assurance that the public health and safety will not be endangered by these construction permit amendments, (2) the activities authorized by the amendments are in compliance with the Commission's regulations, and (3) the issuance of the amendments will not be inimical to the common defense and security or to the health and safety of the public. This change recognizes reliance on the NPDES permits for specifying conditions for the protection of the aquatic environment.

Also enclosed is a copy of the notice which has been transmitted to the office of the Federal Register for publication.

Sincerely,

Original signed by
Darrell G. Eisenhut
