10 CFR 50.90

U. S. Nuclear Regulatory Commission  
ATTN: Document Control Desk  
Washington, D. C. 20555

RE: St. Lucie Units 1 and 2  
Docket Nos. 50-335 and 50-389  
Withdrawal of Proposed License Amendments  
ESFAS Trip/Bypass Single Failure Vulnerabilities

FPL proposed license amendments to certain ESFAS functional units under FPL letter L-2001-216 dated October 18, 2001, "Proposed License Amendments ESFAS Trip/Bypass Single Failure Vulnerabilities." Subsequent to that submittal, FPL discovered additional Technical Specification improvement opportunities with respect to the subject ESFAS functional units. FPL withdraws the previous submittal in order to provide additional time to factor in any Technical Specification improvements. The potential ESFAS vulnerabilities that were the subject of the original Technical Specification change are effectively addressed under existing administrative controls. Therefore there are no operational issues while the Technical Specification changes withdrawn by this letter are incorporated into a later amendment request that will include other related improvements.

Please contact us with any questions.

Very truly yours,

Donald E. Jernigan  
Vice President  
St. Lucie Plant

TLP/KWF
