

Dear NRC Office of Public Affairs,

Could you help me locate some information you had on your website?

I am seeking information about the half-lives of radionuclides that could be released after a nuclear power plant accident. I was told that in your web redesign, this information will be located at: <http://www.nrc.gov/reading-rm/basic-ref/teachers.html> but the links have not been restored yet. Is this information available elsewhere on your site? Or do you know when it will be made available to the public again?

I maintain a website called "Nuclear Power Plant Accidents: A Guide for Informed Citizen Response" and would like to still make this information available to visitors who want to learn more about how they could protect themselves and their families after an accident or terrorist attack.

Thank you very much for your assistance.

Sincerely,
Laurel Kritkauský

Dear Laurel

I don't know when or if that specific information will be restored to the website. A lot of information dealing with nuclear plant accidents is no longer being made available because of the potential benefit of that information to terrorists.

The site that you had specifically referred to was one that the NRC Office of Public Affairs had maintained. They may have an indication whether or not the information will be restored. You can contact OPA directly by email to opa@nrc.gov.

Best regards,
Teresa Linton
