HEAT TRANSFER ANALYSIS OF WTR INCIDENT

SYMBOL: INS:MMM

It occurs to me that your analysis of heat transfer conditions in the WTR incident might be worth publishing. I would suggest that if you agree with this view, you do such editing as you consider necessary and then send draft copies to a few of your heat transfer friends, such as Gambill, Lou Bernath, the WTR people, et al., asking for their comments. After this is done, you can put it in final form as an AEC report. I suppose you should clear it with Technical Information Services and Classification.

When I receive the report of Sears and your visit to WTR, I will attach a summary of your analysis as supplemental information and send it along to the General Manager and other interested parties.
