comments: I read a very frightening article in the Outfront portion of the July/August Mother Jones magazine about the re-use of radioactive metals to make furniture, appliances, etc. I would like to have a written response from the NRC regarding this practice. What safeguards do we have in place to insure safety? I do not believe low levels of radiation are safe because we are getting low levels from multiple sources everyday. I urge you to monitor and thoroughly research this current practice. We will not know the true consequences of exposure to these re-used radioactive materials for years to come. Then it will be too late. I await word from you regarding this important matter. Thank you, Janice Schroeder
