Multiple Addressees

Dear Dr. :

The NRC's Office of Nuclear Regulatory Research would like to invite you to participate and contribute in a meeting to identify and discuss key technical and safety issues related to CANDU reactors. Atomic Energy of Canada, Ltd. has recently expressed interest in having the NRC conduct a preapplication review of the advanced CANDU reactor (ACR700). Since this reactor design contains features not previously considered in NRC light-water reactor reviews, we would appreciate your input on research activities that are needed to support the development of NRC infrastructure for ACR700 review. The main topics to be discussed would be thermal/hydraulics, physics, severe accidents, and fuel code modifications, and structural, mechanical, and material issues unique to the CANDU reactor design. We are planning for a one day meeting on Tuesday, August 27, 2002, between the NRC staff and several of our contractors to be held at NRC Headquarters, Rockville, Maryland.

Please contact us and let us know if you would be willing to support this activity. If you are unable to attend, we would appreciate it if you could recommend another person from your organization with knowledge of the safety aspects of the CANDU design. Also, if you plan to attend, please provide your email address. You can contact either me (FXE@NRC.gov, 301-415-7499) or Paul Norian (PEN@NRC.gov, 301-415-5674). Thank you in advance for your consideration of this matter.

Sincerely,

/RA/

Farouk Eltawila, Director
