Subject: Hardgrove Re: Lucky Mc ACL

for the EA you should address:

potential impacts to plants & animals (lifestock & wildlife),
if any
any benefit from CAP 2000 to 2005?

what other alternatives considered beside additional tailings wells?

do you have end of 2001 values for gallons from tailings, from aquifer, and injected?

any residential or irrigation use of the aquifer in the downgradient area? any expected in
forseeable future (20 yr)?

what conclusions from comparing 95%tile bkg values to estimated POE values (why
presented?)?

Section 4.2.2 (Compliance monitoring) doesn't address definition of exceedance or commit to
action plan if one occurs. Your response to comment 3 says quarterly sampling will be used
initially but not for how long.

where did you address land ownership within long-term boundary? and surrounding land use?

Please call me Mon or Tues
