**Subject:** Draft Regulatory Guide DG 3022

Dear Sir/Madame,

I thank NRC for sending this above referred regulatory guide to me for comments.

These comments, I am posting without having read 'Yucca Mountain Review plan NUREG -1804', referred in the regulatory guide. I have requested NRC (Distribution) to send me a copy of this report. After studying this NUREG report, if any things needs to be added I will send supplementary comments. My observations are given below.

- (i) The definition of the word 'Document' should include optical medium also as magnetic has been included. This definition is on page 1.
- (ii) Under 'Topical Guidelines' point 1.1 'description' should include the position of the facility with respect to the site.
- (iii) Point 1.2 should include the basic attribute of the spent fuel viz. the chemical form, date of removal from the reactor and burnup at the date of removal.
- (iv) Point 1.3 should also include the 'Design Basis Threat' against which the Physical Protection Plan is supposed to be effective.
- (v) Point 2.1.1.2 should include the facility and individual area layout also.

With regards

Sincerely

A.S. Hunjan
