Gentlemen:

Subject: SUB-526
Docket No. 40-3392
REVISED July 3, 2002 REPORT

On July 3, 2002 we submitted two (2) copies of our "Facility Effluent Report" representing the period of July 1, 2001 through December 31, 2001. Due to a miscalculation, this July 3 report was incorrect. This error applied to gaseous effluents only. Corrected values are shown on the attached report.

Sincerely,

J. William Lessig
Plant Manager

JWL/sm

REVISED FACILITY EFFLUENT REPORT

TYPE OF FACILITY:

UF₆ Conversion

LICENSE:

Source Materials No. SUB-526
Docket No. 40-3392

FACILITY ADDRESS:

Honeywell - Metropolis Works
P. O. Box 430
Metropolis, IL 62960

REPORTING PERIOD:

July 1, 2001 - December 31, 2001

GASEOUS EFFLUENTS:

1. The average release rate for the reporting period = $5.9E^5$ ACFM.
2. The principle radionuclides released are particulate, oxides and fluorides as follows:

July - December, 2001

Uranium (Nat.)	=	$7.20E^{-2}$ curies (measured)
Ra ²²⁶	=	$4.20E^{-6}$ curies (Note 1)
Th ²³⁰	=	$1.05 E^{-4}$ curies (Note 1)

LIQUID EFFLUENTS:

1. The average release rate for the reporting period = 2222 GPM.
2. The principle radionuclides released are as follows:

Uranium (Nat.)	=	0.25 curies (measured)
Ra ²²⁶	=	$2.29 E^{-3}$ curies (measured)
Th ²³⁰	=	$5.35 E^{-4}$ curies (measured)

NOTES 1:

Calculated from measured Th²³⁰ and Ra²²⁶ content of the various types of ore concentrates processed during the reporting period. As the ratio from exit points of these nuclides to uranium is assumed to be the same as in the concentrates, this calculation results in conservative (high) reported quantities.
