Subject: FW: Steam Generator Inspection Intervals and Non Destructive Examination Requirements - E-mail 1

Louise, Emmett, Ken, Ted, Cheryl; A hard copy of this letter and all the attachments was sent to Brian yesterday. You may remember that you received hard copies of the SG Exam Guidelines (rev 6) and the inspection interval basis report directly from EPRI a week or so ago (and also at our June 13 meeting). I sent the current letter to formally transmit the information from NEI and to add our responses to Emmett's NDE comments contained in his 9/18/01 memo to me (we gave you a copy of our responses at our June 13 meeting - the attached version has been revised to reflect the results of the meeting).. Because of the e-mail file size, I will be sending the attachments in three e-mails:

1. This e-mail contains the letter and our responses to the NDE comments.
2. The next e-mail will contain the draft of rev 6 and a correction to the Operational Leakage requirements in rev 6 that will be included in the final version
3. The last e-mail will contain the inspection interval basis report.

I am only sending you the proprietary version of all of these documents. Please call with questions.

SUBJECT: Steam Generator Inspection Intervals and Non Destructive Examination Requirements

PROJECT NUMBER: 689

Dear Dr. Sheron:

On June 30th, industry representatives met with your staff to address eddy current test methodology issues raised in a September 18, 2001 NRC memo and to present the latest version of the industry's Steam Generator Examination Guidelines. The purpose of this letter is to formally submit the documents discussed during the meeting. Proprietary and non-proprietary versions of two documents are enclosed: Alex Marion NEI 202-739-8080 am@nei.org
