Gentlemen:

The attached email from the Davis-Besse licensee repeats their request for a copy of the staff's crack growth rate calulations and indicates their need to obtain this information prior to next Wednesday's meeting. I told the licensee that we will not have this information available today.

Can you tell me when you anticipate completing this?

Thanks

Doug

Subject: Crack Growth Rate Calculations

Doug-

Can you please check with the technical staff on whether the information described below on crack growth propagation, modeling, time to reach critical size, etc. that the NRC referred to on the 10/03/01 conference call (see below) can be sent to us by e-mail or fax today. We have not received this yet and the more time we have to review it before the scheduled 10/24/01 meeting, the better we'll be able to discuss it with the NRC staff then.

Thank you.

Subject: Crack Growth Rate Calculations

Doug-

On a telephone conference call held between the NRC staff and the Davis-Besse staff on October 3, 2001 regarding Davis-Besse's response to NRC Bulletin 2001-01, the NRC staff referred to crack growth rate calculations that the NRC staff had not yet made available to licensees. During the call, the Davis-Besse staff requested a copy of these calculations in order to gain an understanding of the NRC staff's conclusions. The NRC staff declined to do so at that time.

During a telephone call today between Mr. Sam Collins and Davis-Besse Vice President Guy Campbell, Mr. Campbell requested that these calculations be made available to the Davis-Besse staff to review and gain an understanding of the conclusions reached by the NRC staff, as these calculations could provide important insights to the NRC staff's perspective on crack growth rates. Mr. Collins response was that these calculations should be made available to the Davis-Besse staff.

Can you please obtain a copy of these today and either e-mail or fax them to me so that I can provide them to the Davis-Besse engineering staff as soon as possible? As you are aware, Davis-Besse is preparing additional information to be submitted this week to the NRC and any information learned or insights gained from the NRC staff's calculations may prove important to include in this submittal.

Thank you for your assistance.
