Subject: Inspections of Davis-Besse's commitments

] NRR

I received this message from Region III and the resident inspector concerning Davis-Besse. A number of questions have arisen on this issue and a meeting was decided upon to determine a number of issues.
1.) Is this consistent with what our expectation was of the dedicated operator? 2.) If not, what approach should the staff take to convey this to Davis-Besse? and 3.) to decide on an approach to implement the commitments.

"Based on my review of the Davis-Besse commitments, one item stands out a bit: The dedicated operator. Doug Simpkins and I have found out that this is not an additional operator or even a "staged" operator. The way this will be implemented is that one of the non-licensed operators each day will be assigned and briefed that he/she is the "dedicated operator" for low pressure recirc. This operator will still have other duties and will go on rounds, etc. Wanted to make sure this was consistent with your understanding. "

I have reserved conference room O-16B6 from 8:30 until 10:00 for the meeting.

Thanks,
Stephen
