Subject: Inspections of Davis-Besse's commitments

} NRR

After this mornings meeting,, a conference has been arranged with Davis-Besse to discuss their commitments. The call will be at 8:30 am tomorrow (8/19). I have arranged for conference room O-4B8 from 8:30 until 10:30. The following questions were forwarded to the licensee so they can prep for the call.

1. Explain how the licensee's "dedicated operator" can save MLOCA CCDP by 17%? Please be specific, and if you have event tree for the reduction, we like to share that information.
2. What is the "dedicated" operator ? How they are different compared with normal operators?

Thanks,
Stephen
