Subject: CRDM Inspection at Davis-Besse

We are interested in the call this afternoon, if possible. Here are the questions which were discussed during this morning meeting:

1. Explain how the licensee's "dedicated operator" can save MLOCA CCDP by 17%? Please be specific, and if you have an event tree for the reduction, we like to share that information.
2. What is the "dedicated" operator? How are they different compared with normal operators?

(designated)
CC: Bill Bateman; F. Mark Reinhart
