As requested by you today (and approved by Brian Sheron), attached are the draft Orders that may be issued to Davis-Besse and Donald C. Cook plants regarding their responses to Bulletin 2001-01, "Circumferential Cracking of Reactor Pressure Vessel Head Penetration Nozzles."

The D-B Order has been forwarded to the EDO via memorandum from Sam Collins and was concurred upon by NRR management. The D.C. Cook 2 Order has not been forwarded to the EDO yet and has not been concurred upon by all levels of management.

My understanding is that the Orders will not be issued until 5 working days from the date of a memorandum from the EDO to the Commissioners that informs them of the staff's intended actions. As of yesterday, 11/19/01, that memorandum has not been issued. Therefore, by my calculation, the Orders will not be issued any sooner than Wednesday, 11/28/01.

This information is predecisional and is, therefore, not intended for public disclosure.
