What else would you like us to know?

This process, the public hearings, appears to be solely for the benefit of the scientists involved. They present, get what they feel to be 'layman' questions, and become reinforced in their previously held beliefs about their work and scientific understanding. THERE IS VERY LITTLE CHANGE HAPPENING HERE!

YOUR COMMENTS ON THE YUCCA MOUNTAIN REVIEW PLAN, REVISION 2

DRAFT REPORT FOR COMMENT

MAY 2002

Democracy is an ideal the United States supposedly tries very hard to live up to. The main idea is to give the people ownership over their own lives. Even in the presence of complex scientific ~~technical~~ choices,

~~democracy must continue. When the people decide what is good for the people.~~ This is clearly not the procedure of the NRC, DOE, and apparently other governmental departments. Holding a few public hearings every now and again does not constitute

democracy. Might I suggest that the NRC employees take some time to get out of their offices and away from other NRC employees. They may find benefits in mingling with other citizens,

other people, and other viewpoints. Democracy requires an open mind, not science.
