**SUSQUEHANNA STEAM ELECTRIC STATION
SEMI-ANNUAL PART 26 PERFORMANCE DATA REPORT
FOR JANUARY 1 TO JUNE 30, 2002
PLA-5517**

Docket Nos. 50-387
and 50-388

Attached is PPL's semi-annual Fitness-For-Duty performance report covering the period between January 1, 2002 and June 30, 2002. This report consolidates corporate and station data for Susquehanna SES, Units 1 and 2.

Sincerely,

R. L. Anderson

	Marijuana	Cocaine	Opiates	Amphetamines	Phencyclidine	Alcohol	Refusal To Test
Licensee Employees	2	0	0	0	0	2	0
Long-Term Contractors¹	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Short-Term Contractors	3	0	0	0	0	1	2*
Total	5	0	0	0	0	3	2*

¹ PPL has no long-term contractors

- *One contractor test was determined to be a "Refusal to Test – Test not Performed" by the MRO and reported as a positive in the Pre-access Testing Category.
- Testing Results in the "Other Category" included:
 - Eight (8) recollections because of dilute specimens.
 - *One (1) test was determined to be a "Refusal to Test – Test not Performed" by the MRO. The contractor left the site without providing a urine specimen. The contractor appealed the determination. Licensee Management removed the sanctions concerning suspension of access to the protected area based upon the Contractor's reported confusion concerning the need to provide the urine specimen promptly. This was reported as a voided test, not a positive result.
 - One (1) test for a Licensee employee was ruled "Test Cancelled – Fatal Flaw – Protocol Error" by the MRO. It is included in the "Other Category" and described under the "Identified Program Weaknesses" section of this report.

Identified Program Weaknesses

- Identified a potential problem concerning Licensee's low rate of "For Cause" tests. The issue has been entered into our Corrective Action Program for investigation and appropriate action.
- A screening laboratory technician's error caused a presumptive positive test to be declared, "Test Cancelled – Fatal Flaw- Protocol Error" by the MRO after his investigation. Because of a laboratory process deficiency, the technician destroyed the urine specimen rather than forwarding it to the HHS Laboratory for confirmatory testing. The technician misread the screening test results as "negative" rather than "positive" and destroyed the specimen. The urine specimen was destroyed prior to re-verification by a second person. When verification was completed the error was identified. The error was entered into the Licensee's Corrective Action Program. The Condition Report was written such that the presumptive positive results could not be identified with the individual. Corrective actions ensure that the verification of results must be completed prior to specimen being destroyed.

Program Changes

- GC/MS Confirmatory Cut-off level changes – to be consistent with 10CFR26.

Synopsis of GC/MS Confirmatory Cut-off changes:

Amphetamines - from 100 ng/ml to 500 ng/ml
 Cannabinoids - from 10ng/ml to 15 ng/ml
 Cocaine - from 50 ng/ml to 150 ng/ml
 Opiates - from 100 ng/ml to 300 ng/ml
 Phencyclidine - from 10 ng/ml to 25 ng/ml
