Subject: NRC Temporary Instruction Bulletin 2002-02

Christine:

I've just drafted the temporary instruction for NRC regional inspectors providing guidance on Bulletin 2002-02. As a heads up to you, I've instructed them to assure the plants use the procedures that have recently been demonstrated by the vendors under EPRI/MRP supervision, using CIP manufactured flaws.

I'm sure the high susceptibility plants currently in an outage would appreciate having the draft of this report with the demonstrated procedures to show the regional inspectors, or some other version of the results.

When I left Westinghouse's facility last week, Kim Kietzman suggested I email you.

Regards,

Tim Steingass
