

Babcock & Wilcox*a McDermott company***Naval Nuclear
Fuel Division**

To	B.G. Horn - NRC	
From	A.D. Thompson - B&W	File No. or Ref. SAPFACL497
Subj	April IAEA Audit Schedule	Date 4/10/97

Thank you for the 4/10/97 FAX regarding the April IAEA audit .

Regarding the IAEA itinerary (item #1), may I offer a suggestion to consider changing the audit start date to 4/20/97, at 8:30 am providing it would accommodate the IAEA travel plans. I recommend this change because B&W will not have any product to sample. The product that was awaiting chemical analysis results during the March audit is available. The results indicate the impurity levels exceed the specification requirements, therefore B&W can not declare this as product. B&W will provide additional details about this at the April audit.

Item #2. The DIQ will be ready for the April audit.

Item #3 B&W is confirming with the Ruska manufacturer the arrangement as identified by IAEA

Item #4 The PMCAs should ship the w/o 4/14. The Americium source is causing the delay

Item #5. See Item #1.

Also, B&W has reorganized and the Project Manager on the Sapphire contract has been changed to Pam Horning She will be available to meet with you and she will discuss the project status with the IAEA If I can be of further assistance, please call me on ext. 5978
