Subject: McGuire Nuclear Station  
Docket Nos. 50-369, 50-370  
Proposed Correction to License Amendment Nos.  
195/176, Facility Operating Licenses NPF-9 and  
NPF-17, (TAC Nos. MA8696 and MA8697)

By letter dated September 22, 2000, the NRC issued approved License Amendment No. 195 to Facility Operating License NPF-9 and Amendment No. 176 to Facility Operating License NPF-17 for the McGuire Nuclear Station, Units 1 and 2. The amendments revised the Technical Specifications and associated Bases to reference the Westinghouse Best Estimate Large Break Loss-of-Coolant Accident (LOCA) analysis methodology described in WCAP-12945-P-A, March 1998.

By letter dated September 22, 1999, the NRC issued approved License Amendment No. 188 to Facility Operating License NPF-9 and Amendment No. 169 to Facility Operating License NPF-17. The amendments revised various sections of the Technical Specifications to permit use of Westinghouse's Robust Fuel Assemblies for future core reloads.

During the implementation review of the approved changes, discrepancies were identified on page 5.6-4 of the Technical Specifications. It was discovered that changes previously issued in License Amendment 188/169 had been erroneously eliminated through an administrative error.

Attachment 1 contains a markup of page 5.6-4 from Amendment 188/169 and adds the reference to WCAP-12945-P-A from Amendment 195/176. Attachment 2 contains the corrected page containing both approvals to be implemented during Unit 2, Cycle 14.
