Dear Mr. Lesar

I'd like to voice my strongly opposition to the proposed uranium enrichment plant to be built in Hartsville, Tennessee.

I believe this plant would pose a health and safety concern to the Hartsville residents as well as the people of Nashville (my residence) as Nashville is downstream from the proposed plant's water table.

There are legitimate safety concerns regarding the past records of such facilities. Also, I have great concern regarding the transportation of hazardeous waste materials over our Tennessee highways. And where is this waste to go and who wants it?

I believe this project is being forced upon us, including the majority of Hartsville residents, against our will! Sincerely, William R. Chest
