

Dear Mr. Lesar,

I am writing in reference to the proposed uranium enrichment facility in Hartsville, TN. I question the need for such a facility. I think we need to get out of the nuclear power business not increase it. I think this facility would have an adverse affect on Hartsville and the communities beyond. The water supply for much of Middle Tennessee is the Cumberland River, which is beside the proposed plant. Our water would be in jeopardy. Seeing the poor environmental record of the facilities in Oak Ridge, TN and Paducah, KY, I fear the effects of such a plant in Hartsville or anywhere else. The waste created from this plant might stay there for years. We do not need this. Please deny LES a license.

Respectfully,

Rusty Sweeton
