Procedures for the Conduct of Ultrasonic Examinations of Reactor Vessel Head Penetrations

Numerous owners of PWRs have conducted or plan to conduct inspections of reactor vessel head penetrations in response to bulletins issued by the NRC. Many of these inspections are being made using procedures developed by Framatome ANP, and these owners need to refer to the procedures used when describing their inspections to the NRC.

Enclosed are copies of two procedures and a detailed outline for the training provided to those personnel responsible for conducting the examinations. The three documents provided herein are:

- Remote Ultrasonic Examination of Reactor Vessel Head Vent Line Penetrations
- Remote Ultrasonic Examination of Reactor Head Penetrations
- Reactor Head Penetration (RHP) UT Analysis Training

Framatome ANP is providing these documents for reference purposes only and no review is being requested.

Framatome ANP considers the material contained in the enclosed documents to be proprietary. As required by 10 CFR 2.790(b), an affidavit is enclosed to support the withholding of the information from public disclosure.

Very truly yours,

James F. Mallay, Director
Regulatory Affairs
