Subject: Comments on LES

Dear Nuclear Regulatory Commission,
 Here are my comments on the proposed LES Uranium Enrichment Facility and the LES "white papers".

Of course you should make some pre-license decisions. Please make them all in favor of LES. After all, its LES that owns the Congress which funds your agency. And your funding as an agency should be your most important concern. So please act with utmost haste to appease LES, make Congress happy and preserve your funding. In fact, i think you all should go ahead and give LES every single license that have or will apply for. Why bother with all the public comment gobbledey gook? Give LES all their permits now, and you will save both time and money with no pesky EIS's, public hearings, etc...

After all, the public doesn't count in this country any more any way, so why even pretend to listen to the public or seek public comment? In fact, this should be the last NRC public comment period on anything ever. All of your decisions are pre-ordained in favor of your masters in the nuclear power and nuclear weapons industry so please dispense with the formalities and give all the permits out now.

LES is such an impressive corporate citizen. You all should bend over backwards to appease them and do things the way they want to. This shouldn't be to difficult, since you all are spineless anyway.

Give out the permits and lets get on with the business of making money and filling North America up with toxic, radioactive waste. These comment periods and petty concerns like democracy, a clean environment, environmental justice, the will of a community, etc... are just not important. Business, profits and job creation are much more important. Maybe y'all should have a comment period that is just for LES and the Nuclear Power Institute.

LES is trying to influence its own licensing procedure. I think y'all should just sign a contract with LES and let them pay you to license themselves. After all, they are so confident that everything is ok and safe, they don't need oversight and regulation. LES could be self-regulating. That would be in line with Al Gore and Emperor Bush and their commitment to "Market Environmentalism".

All hail the Market! It will save everything! In the future, we can all be rich selling different sizes, shapes, colors and types of radioactive waste to each other.

Thank you for considering my comments. Again, please give LES all the necessary permits now, so that we can all get on with nuclear waste arnegeddon. Personally, i've been waiting on it since the '80's and i am tired of waiting. All hail the nuclear fascist state of Amerikkka!
 All hail Emperor Bush!

ps. in the event that you decide to ignore my wise advice to dispense with these troublesome comment periods, please add the above po box to your NEPA list and other lists for all mailings and public involvement with this LES boondoggle.

pps. thanks for your recent capitulation to the DOE and TVA regarding tritium production at Watts Bar. We should all be very happy about military production for weapons of mass destruction at civilian nuclear facilities, especially since we tell the rest of the world that they can't do that. and thanks for putting military targets in my backyard you jerks.

ppps. Please pass on the following message to your masters at LES:

New Nukes in Tennessee?

Expect Resistance

Assholes
