Dear Sir:

who reference to the IFS minimum enrichment plant you (Novadale) country. I am opposed to a radioactive product plant being located here.

I am anxious that we have laws to protect our environment such as highway littering, protecting the wetlands and laws to keep everyone traveling in seat belts and do not what might drink or use related activities near our school and churches) and we consider a radioactive product to pollute our air and possibly our water and waste to stay indefinitely in the night. We have heard "No danger" when asbestos was put in building 50 years ago, who thought it would be dangerous to this generation? Please consider the potential hazard of this product. Please know that the area you location is good proved as it has been under water before, understand the product needs completely dry condition.
