Title Emergency Equipment Readiness	Revision No 11	

1.0 **PURPOSE**

1.1 This procedure delineates the requirements to maintain availability and reliability of emergency equipment.

2.0 **APPLICABILITY/SCOPE**

2.1 This procedure applies to the emergency equipment designated for use in implementing the Emergency Plan.

NOTE

Fire fighting emergency equipment used in implementing the Emergency Plan is listed in Fire Protection Procedures, 1104-45A through Q and in procedure 1038. Inventories and operational testing of this equipment is performed under the Operations Surveillance, Technical Specification, and Preventive Maintenance Programs and is beyond the scope of this procedure.

NOTE

Emergency Plan and Implementing Procedure binders issued by Document Controls are not listed in this procedure as they are maintained by the Document Controls Group

NOTE

The locker in the simulator is provided for drill use only; it is not required by Tech. Specs. Therefore, failure to properly maintain this locker does not constitute a Tech. Spec. violation

3.0 **DEFINITIONS**

3.1 None

	TMI – Unit 1 Emergency Plan Implementing Document	Number TEP-ADM-1300.05
Title Emergency Equipment Readiness	Revision No 11	

4.0 PROCEDURE

NOTE

The steps in this section delineate the various requirements related to maintaining the readiness of emergency equipment used to support the emergency plan. The requirements stated in these steps need not be met in the sequence in which they are listed.

A. Inspections, Tests and Calibrations

- Emergency kits/lockers shall be inventoried (per Attachments 1 through 10) once each calendar quarter and after use during drills, exercises, training or actual emergencies. An inventory performed after use during drills, exercises, training, or actual emergencies may be used to satisfy the quarterly requirement also.
 - ◆ Quarterly inventories should be scheduled such that they can be completed, reviewed and forwarded to Emergency Preparedness at least 10 days prior to the end of the quarter.
- Respiratory protection equipment shall be inspected once each calendar month and after each use per Reference 6.4. Attachments 12 through 14 shall be completed during inspection. A check performed after use of respiratory protection equipment may be used to satisfy the monthly requirements.
- Emergency equipment listed in Attachment 11 shall be checked once each month in accordance with the plant P.M. schedule.
- When removing an instrument for repair/calibration from any emergency equipment storage location, an alternate equivalent instrument shall be provided as soon as possible but prior to the end of the shift.
- Calibrations of emergency instrumentation shall be performed in accordance with Reference 6.6.
- Emergency lockers/kits shall be visually inspected for seal integrity monthly. Lockers or kits with suspect integrity shall be inventoried.

NOTE

Seal integrity shall be checked prior to opening lockers/kits for operational check of portable equipment. Locker/kits may be resealed immediately after operational checks are complete and equipment returned.

- Perform an inventory/inspection or calibration at any time as directed by the Manager, Radiological Controls Field Operations, or Manager, Radwaste and Chemistry.
- Emergency equipment shall be restored/restocked and inventoried by the end of the following working day after the end of its usage.

	TMI – Unit 1 Emergency Plan Implementing Document	Number TEP-ADM-1300.05
Title Emergency Equipment Readiness	Revision No 11	

B Details

- Emergency Radiological Controls/Radiological Monitoring/Post Accident Sampling Equipment shall be located in the following areas in accordance with the TMI Emergency Plan to allow protection of emergency personnel, radiological/environmental monitoring and availability of other equipment and supplies needed during emergencies:
 - ◆ Security Processing Center (P.C.)
 - ◆ Rad Con Lab/Control Point
 - ◆ Reactor Building Personnel Access Hatch
 - ◆ Reactor Building Equipment Hatch
 - ◆ Control Room
 - ◆ Simulator
 - ◆ Warehouse #1
 - ◆ Warehouse #3
 - ◆ Training Center/Remote Assembly Area
 - ◆ Sample Analysis Lab
 - ◆ Plant Chemistry Locker
 - ◆ Emergency Operations Facility (EOF)

- Inventories shall only be considered complete when all required items are present in the kit/locker, all equipment/instruments in the kit/locker are within expiration date/calibration as applicable.
 - ◆ Some inventory forms require large quantities of an identical item to be stored in the kit or locker (e.g., procedure exhibits, rad warning sign inserts, etc.) In such cases:
 - Identical items may be sealed in a clear bag, pouch or container and labeled with the contents and quantity.
 - If the item has a revision number or expiration date, it must be visible through the container and/or stated on the label
 - Such items, need not be individually counted during the performance of an inventory so long as the seal is not broken and the items are not out of date.

	TMI – Unit 1 Emergency Plan Implementing Document	Number TEP-ADM-1300.05
Title Emergency Equipment Readiness	Revision No 11	

- All emergency kits and lockers shall be sealed. Seals shall be unique in color or design so as to be easily distinguished from tamper seals commonly available on-site.
 - ◆ Certain equipment is stored nearby or in the vicinity of (i.e., within the same room) certain kits or lockers. Some equipment is too bulky (e.g., air samplers) to store in a kit. Some equipment must be in a ventilated area (e.g., radios with batteries on charge, etc.).
- All completed inventory forms shall be forwarded to the following personnel for review:
 - ◆ Group Rad Controls Supervisor - Att. 1 through 7, Att. 10, and Att. 11 (R.C. Section)
 - ◆ Group Supervisor, Radwaste - Att 12 through 14
 - ◆ Manager, Radwaste & Chemistry (or designee) - Att. 8, Att. 9, and Att. 11 (Chem. Section)

The Inventory, Check and Inspection Forms (originals) shall be forwarded with applicable plant surveillance requirements. Copies of the Inventory, Check and Inspection Forms shall be forwarded to the Emergency Preparedness' Department for review. Forms are to be retained for the life of the plant in accordance with Ref. 6.9

C. Final Conditions

- All equipment/instruments have been inventoried and checked as required, and inventory forms/operational test forms have been reviewed by the Group Radiological Controls Supervisor, Group Supervisor, Radwaste or Manager, Radwaste & Chemistry (or designee) as appropriate, and copies forwarded to the Emergency Preparedness Department
- Used kits/lockers are reinventoried, resupplied and sealed

5.0 **RESPONSIBILITIES**

NOTE

The steps in this section assign responsibilities to various persons for maintaining the readiness of emergency equipment used to support the emergency plan. The responsibilities stated in these steps need not be accomplished in the sequence in which they are listed.

- A. The Rad Health & Safety Director has the ultimate responsibility for all radiological control emergency equipment and its availability and reliability with the exception of equipment stored at the Sample Analysis Laboratory
- B. The Manager, Radwaste & Chemistry has the ultimate responsibility for all Reactor Coolant System Post Accident Sampling equipment located in the Sample Analysis Laboratory. He/she is responsible for its availability and reliability.

	TMI – Unit 1 Emergency Plan Implementing Document	Number TEP-ADM-1300.05
Title Emergency Equipment Readiness	Revision No 11	

- C. The Group Radiological Controls Supervisor and the Manager, Radwaste & Chemistry, or their designees, shall assign appropriate personnel to perform inventory and operational checks on the emergency kits and lockers under their jurisdiction.
- D. The Group Radiological Controls Supervisor, and the Manager, Radwaste & Chemistry, or his/her designee, as appropriate shall ensure that the following items are performed during an inventory:
- Complete the inventory form for that kit/locker.
 - Verify all equipment is in working order.
 - ◆ Perform an operational test of equipment such as flashlights, megaphones, etc., by energizing each item and checking for normal operation.
 - ◆ Portable radiological instrumentation shall be battery checked and, if the kit/locker is being inventoried after use, a response check shall be performed to verify operability.
 - ◆ For portable air samplers, disconnect the sampler from the charger and energize to check for normal operation. Reconnect the charger after testing.
 - Replace all missing items.
 - Remove all outdated items.
 - Ensure that the kit or locker is organized, orderly and clean
 - Ensure that the kit or locker contains no extra tamper seals.
 - Ensure that the kit/locker contains the required controlled copy procedures and that the required forms in the kit/locker are the current revision.
 - Ensure that instruments and air samplers contained in emergency kits and lockers are within proper calibration frequency.
 - Note discrepancies on inventory form, and notify the Manager, Radiological Controls Field Operations, or Manager, Radwaste & Chemistry or their designees, as appropriate, of these discrepancies and/or broken locks or seals
 - Emergency instrumentation removed from lockers/kits shall be replaced prior to end of working shift except during actual emergencies or extended drills/exercises.
- E. The Group Supervisor, Radwaste or his/her designee, shall conduct the required inspections for all respiratory protective equipment. This will be accomplished by ensuring completion of the following:
- Replace any equipment which is missing or requires maintenance.
 - Inspect each item per the requirements of Reference 6 4

	TMI – Unit 1 Emergency Plan Implementing Document	Number TEP-ADM-1300.05
Title Emergency Equipment Readiness	Revision No 11	

- Place an Emergency Respiratory Equipment Inspection tag with each piece of equipment found acceptable.
- Complete the Inventory Form for Full Face Respirators w/Canisters (Attachment 14), the Inspection of Emergency Respiratory Equipment for SCBA's (Attachment 12), and the Inspection of Emergency Respiratory Equipment for SCBA Cylinders (Attachment 13). Forward completed originals to the Site Emergency Preparedness Manager for review and filing.

F. Individuals shall notify the Group Radiological Controls Supervisor, or Manager Radwaste & Chemistry as appropriate, of all emergency equipment usage at the end of its usage. Emergency equipment shall be restored/restocked and inventoried by the end of the next normal workday following the end of its usage ("normal workdays" are the days of the plants scheduled daylight work week). Emergency Preparedness Department shall be informed if equipment cannot be restored/restocked as required above.

Title	Emergency Equipment Readiness	Revision No 11

**ATTACHMENT 11 (Part 1)
Monthly Check of Emergency Equipment
(Rad. Controls)**

Page 1 of 9

Check seal integrity per Page 27 (see Section 4.0, Part A, 6th bullet also) prior to opening kits/lockers

A. Battery Check and Calib Due Data Check of Portable Radiological Instruments Month: _____ Year: _____

Enter the serial number and perform battery check, then initial and date.

If battery check is unsat., replace batteries with the spares in the kit/locker and recheck, then place new spares in the kit/locker.

Verify that the time from calibration date to the calibration due date is less than 24 months (as required in reference 6.7).

If the time from calibration date to calibration due date is 24 months or greater for any instrument – notify the Group Supervisor – I&C

Location and Equipment Type	Serial No	Battery Check	Calib Due Date	Initial/Date
Rad/Env Monit Kit #1 (stored on-site)	E520 or Equiv.			
	E140N w/HP260 (Equiv)

Reactor Building Personnel Access	E140N or Equiv.			
	Digital Dosimeter			
Reactor Building Equipment Hatch	Digital Dosimeter			

NOTE

Equipment found to be UNSAT during a monthly check must be repaired and returned to the kit/locker OR replaced by equivalent equipment by the end of the next normal workday ("normal workdays" are the days of the plant's scheduled daylight work week).

If repair or replacement cannot be accomplished within the time limit, an explanation must be provided in writing. If repair or replacement cannot be accomplished within 7 calendar days, a CAP must be initiated.

Page 4 of 9

D. Portable Radio Checks: Month: _____ Year: _____

- Portable Radio Battery Maintenance:

- ◆ Exercise all available portable EARS radio batteries using the battery analyzer(s) in the Rad Con Field Ops office area. The steps for exercising batteries are:
 - (1) Three batteries can be evaluated at a time on each analyzer.
 - (2) Insert the battery into the battery well on the analyzer.
 - (3) While the word "CHARGE" is flashing on the display below the battery, press the "FUNCTION" button below the display 2 times. The display should read "CYCLE: 1". This battery will now undergo a Charge-Discharge-Recharge process to exercise it. This process will take several hours to complete. When completed, the analyzer will display the battery's capacity in MILLIAMP HOURS.
 - (4) When the batteries have completed the exercise sequence, the analyzer will display "READY" and the battery's capacity value.
 - (5) Write the battery capacity and date of test in grease pencil on the battery's capacity label.
 - (6) If a battery's capacity is 1280 MILLIAMP HOURS or greater, this battery is satisfactory for use.
 - (7) If the capacity is less than 1280 MILLIAMP HOURS after exercising is complete (i.e., "READY" is displayed with the capacity value):
 - (7.1) Momentarily lift the battery from the analyzer and then place it back into the battery well.
 - (7.2) While the word "CHARGE" is flashing on the display below the battery, press the "FUNCTION" button below the display 5 times. The display should read "CYCLE: 4". This battery will now undergo a repetitious Charge-Discharge-Recharge process to attempt to recondition it. This process will take up to 2 days.
 - (7.3) Re-check this battery after reconditioning is complete. If it displays 1280 MILLIAMP HOURS or greater, this battery is satisfactory for use.
- Write the battery capacity and date of test in grease pencil on the battery's capacity label.

	TMI – Unit 1 Emergency Plan Implementing Document	Number TEP-ADM-1300.05
Title Emergency Equipment Readiness	Revision No 11	

**ATTACHMENT 11 (Part 1)
Monthly Check of Emergency Equipment
(Rad. Controls)**

Page 5 of 9

- (7.4) If a battery's capacity is less than 1280 MILLIAMP HOURS after reconditioning is complete (i.e., "READY" is displayed with the capacity value):
- Remove the battery from service.
 - Request that a replacement battery be ordered
- (8) Exchange the batteries that are stored with the emergency field monitoring kits at the Processing Center with freshly exercised batteries
- (9) Fill in the information on the table below for batteries that have been placed with the field monitoring kits.
- (10) Batteries stored with the field monitoring kits should be placed on charge if space is available in the charger(s) at these locations
- (11) Bring any batteries that have been removed from the kit locations back to the Rad Con Field Ops office for exercising.

Monthly Check of Emergency Equipment
(Rad. Controls)

Page 7 of 9

Month: _____ Year: _____

- **Portable Radio Operability Test:** Check the operability of each of the portable EARS radios by establishing communication with the Rad Con Lab or EACC as follows:
 - (1) Turn on the portable radio by rotating the “power on-off/volume” knob clockwise.
 - (2) The radio will perform a “power up self test” and then display.
 - ◆ Its unit number (e.g. “TMI P 1” is portable radio #1) and
 - ◆ Either “EARS” or “CC SCAN” depending on whether the radio is receiving the system Control Channel signal or not (i.e. if “CC SCAN” appears, the radio is probably in a bad location and should be moved outdoors for the test).
 - (3) Write the portable radio’s number (e.g. “TMI P 1”) in the space provided on the table below.
 - (4) To transmit:
 - ◆ Ensure that the word “EARS” appears in the radio’s display and then press the Push-To-Talk (PTT) button (elongated button on the left side of the radio).
 - ◆ When the short, medium pitch beep is heard, call for the TMI Rad Con Lab or EACC.
 - If a high pitch beep is heard, the system is temporarily busy. Don’t release the PTT button- continue pressing it and wait for the short, medium pitch beep before starting to speak. The delay should typically be no more than a few seconds.
 - ◆ When speaking, hold the radio approximately 3 inches from the mouth and speak in a normal voice.
 - (5) If communication with the TMI Rad Con Lab or EACC is made successfully, circle “YES” in the appropriate space on the table below.
 - (6) If communication with the TMI Rad Con Lab or EACC is not successful, circle “NO” in the appropriate space on the table below.
 - (7) Repeat the above steps ((1) through (6))for each portable radio.
 - (8) Report any communication failures to the GRCS upon completion of the test.
 - (9) Document action taken to correct problems in the remarks section of the table below.
