

PVNGS 2002 LSRO License Examination  
Post-examination Assessment

**Written Examination Question Assessment**

Out of the five candidates, three or more answered two questions incorrectly.

<b>Question #</b>	<b># Incorrect</b>	<b>Description</b>
36	5 out of 5	Question asked which of the listed systems receives an isolation signal from a CIAS. The correct answer being RU-1, Radiation monitoring. The candidates picked NC feeling this was the most important system listed relevant to their job. This information was covered as part of their training material. <b>The question is valid as written.</b>
39	3 out of 5	Question asked for whose approval is required to authorize exceeding overtime limitations. Tech Specs state that the Director Level is required. The procedure denotes that his signature is required but that the Unit Department Leader may sign for him via telecon. This confused some candidates. The information was covered as part of their training material. <b>The question is valid as written.</b>

All examination questions missed by any candidate have been reviewed and there are no other issues identified with any other questions.
