Dear Mr. Henson:

This responds to your information request of October 22, 2002 regarding the potential impacts of a proposed project on federally listed endangered and threatened species. The U.S. Nuclear Regulatory Commission is considering the request for termination and release for unrestricted use of the Charleston Area Medical Center's Center for Reproductive Medicine at 830 Pennsylvania Avenue in Charleston, Kanawha County, West Virginia. This facility requested to terminate authorization for use of unsealed and sealed radioactive materials at Suite 304 in the Center for Reproductive Medicine. The licensee's research in that laboratory used hydrogen 3 (tritium) and carbon-14 in unsealed laboratory research experiments, and possessed a number of sealed calibration sources for the radioactive materials analysis devices. Radiological surveys have indicated that no environmental releases occurred over the lifetime of the license, which was issued in 1973.

No federally listed endangered and threatened species are expected to be impacted by the project. Therefore, no Biological Assessment or further Section 7 consultation under the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq.) is required with the Fish and Wildlife Service. Should project plans change, or if additional information on listed and proposed species becomes available, this determination may be reconsidered. A compilation of federally listed endangered and threatened species in West Virginia is enclosed for your information.

If you have any questions regarding this letter, please contact Linda Smith, of my staff, or contact me directly at (304) 636-6586, or at the letterhead address.

Sincerely,

Jeffrey K. Towner
Field Supervisor
