Dear Mr. Chappell:

The General Electric Company (GE) respectfully requests the Nuclear Regulatory Commission (NRC) to accept an amendment to the previously submitted request for renewal of the Certificate of Compliance No. 5939 for the Model 1500 shipping container (Ref. 2). The requested amendment modifies the generic Model 1500 loading procedure to include a revision of the vacuum drying procedure. The enclosed "Generic Model 1500 Type B Shipping Package Loading Procedure" dated November 16, 1992 and modified by Operations Change Notice (OCN) 1561 (11/21/97), and OCN 1562 (12/09/97) incorporates changes to the vacuum drying procedure.

These changes resulted from the responses to the investigation (Ref. 3) of a gasket failure on a shipment of sealed cobalt-60 sources in the serial number 1507 cask. The investigation concluded that excessive internal pressure resulted from the vaporization of residual moisture inside the cavity of the 1507 cask. The resolution to this problem was to revise the drying procedure to require the verification of a full cold trap, to verify the continued decline in the cavity pressure after reaching an absolute pressure of 2.5 torr, for a period of five minutes, and to assure that the cavity was isolated from the cold trap before shutting off the vacuum pump (to prevent back-flow to the cavity).
