Mr. Cass R. Chappell, Section Leader
Cask Certification Section
Storage and Transport Systems Branch
Division of Industrial and
Medical Nuclear Safety, NMSS
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Ref: Certificate of Compliance No. 9215, Docket No. 71-9215

Dear Mr. Chappell:

This is to request approval to utilize alternative cask internals, i.e. drum assemblies, in the referenced shipping package, which has a B(U) classification. The alternative drum assemblies are approved for use under other certificates (Certificate of Compliance No. 9102 and Competent Authority Certificate USA/5800/B) which do not have a B(U) classification.

We are making this request to allow foreign shipments of double-encapsulated, cobalt-60 teletherapy sources for teletherapy units that have source holders that can not be accommodated in the drum assembly currently authorized by Certificate of Compliance No. 9215.

In anticipation that an amendment to Certificate of Compliance No. 9215 will be needed, the enclosed Technical Assessment is submitted in support of adding the alternative drum assemblies. If additional information or clarification is required, please call.

Sincerely yours,

NEUTRON PRODUCTS, INC.

Frank Schwoerer, Vice President
