

PBMR
Nov 30, 2001

Outline

for PBMR UHS design range is -2°C to 58°C (for projected plants)

power is sensitive to pressure

in loss-of-load do not trip plant, use generator bypass v.l.s. to run back the plant + then re-synch to the grid. - modules are independent \rightarrow do not share load

they also use MATLAB for control issues
