Subject: PBMR RAIs

RES is in the process of packaging the PBMR RAIs for transmittal to Exelon. They are going to bin the RAIs into three categories as follows:

- (1) information that is important for the staff to formulate policy positions or significant safety/technical issues that will be provided to the Commission in a June 2003 SECY paper. (Exelon will be encouraged to respond during the pre-application review)
- (2) information that is important for long lead time issues related to the regulatory infrastructure necessary to review a PBMR license application. (Exelon will be encouraged to respond during the pre-application review)
- (3) information that is not necessary to complete pre-application review. (Exelon should address as part of PBMR license application)

RES will provide drafts in the next 1 - 2 weeks so NRR has a chance to review the final RAIs and categorization before the RAIs are sent to Exelon at the end of the month.
